

## ELIMINATING UNPLEASANT ODORS IN CHINA'S MAJOR AUTOMOTIVE MANUFACTURER'S FACTORY

22nd July 2021

One of major China's car seat manufacturers, that works with all major automakers and vehicle classes, like Audi and Volkswagen, started facing a smell issue. As the company is working with different types of materials, including leather and textile, they realized that the storage unit where the seats are being kept for a while builds up an unpleasant odor that is being absorbed into the already made car seats. To eliminate the smell from their premises, the company reached out to a leading fabric-based air distribution solution manufacturer FabricAir.

## FABRICAIR IN AID TO CREATE AN “ICE CUBE” FOR UPCOMING WINTER OLYMPICS IN BEIJING

10th June 2021

Having good air distribution is extremely important no matter the building. But it is even more important in the sports centers, where the best world athletes compete for awards. Beijing, China, will host the Winter Olympics in 2022 and they decided to retransform their National Aquatics Center, better known as the “water cube”, to host winter events. Soon enough, the building will be known as the “Ice Cube” and all the curling activities will take place there. Therefore, National Aquatics Center chose FabricAir, a leading air distribution solution provider, to design a state-of-the-art air distribution system that would meet the highest quality standards of the International Olympic Committee.
