
Easy installation

Easy installation

FabricAir dispersion systems are intuitive and simple to install. Each duct section is marked with an individual tag, which lets you know exactly where each piece should go. There are no trade specific tools required; everything you need can be found in a handy-man's tool box. Easy installation significantly reduces labor hours compared to metal ducts or other fabric duct systems. This helps to ensure that your project is built on time and within budget.

Cost savings from installation

Installing FabricAir dispersion systems is fast and easy, and will reduce costs for the entire project due to the lower number of man hours.
