

FabricAir products

FabricAir dispersion and distribution systems comprises three main elements: fabric, flow model, and suspension. By combining the ideal solutions from each element FabricAir creates a customized air distribution system tailored to your specific needs. This approach ensures supreme air dispersion and comfort regardless of the complexity of the project requirements.

Benefits

- ✓ All-in-One for better looking ducts
- ✓ Balancing is not necessary
- ✓ Extensive range of fabric duct profiles
- ✓ Longest throw ever
- ✓ Condensation-free
- ✓ Draft-free
- ✓ Noiseless
- ✓ The entire duct is an air diffuser

Fabric choices

FabricAir offers many choices of fabric and color for our ducts. Your choice of fabric will depend on the aesthetics as well as flexibility, air flow, fire resistance and maintenance cost.

Flow models

The flexibility of FabricAir ducts lies in the ability to combine different air flow models depending on your needs and requirement. Creating a custom air dispersion system ensures superior air distribution and comfort, and an unrivalled indoor climate.

Suspension systems

FabricAir dispersion and distribution systems can be installed in numerous ways. Each suspension system comes with its own benefits and best practice recommendations, offering a unique set of qualities and the greatest flexibility to your system.
