

Cherrystone Clams achieved stable room temperatures with Zip-A-Duct

FabricAir Zip-A-Duct is great for a quick fix or simple applications. Kerri Dress, visited the Cherrystone Aqua Farms to learn how their FabricAir solution has stabilized the temperature in the facility.

7th February 2018

Yesterday, Kerri Dress, Territory Manager in Maryland & Virginia, talked with Gary of Cherrystone Aqua Farms and Bob of R.E. Michel Company, LLC (Onley, VA Branch) and saw the completion of our Zip-A-Ducts in the Cherrystone clam farming facility. Gary, being a one man show for the grounds, loved how simple it was for him to install.

This was a unique application with high humidity and large sunlight windows. Stabilizing the room temp at 19,4°C [67° F] was essential to enabling healthy growth of the organisms. Our hygienic, condensate-free ducts are one important piece of this puzzle.

After the visit Kerri stated "Prior to this visit the only thing I knew about Cherrystone Clams was that they're delicious; I definitely have a newfound appreciation!"
