

Internal 360° Hoops

Internal 360° Hoops added to a Type 8 suspension in an internal sleeve.

Internal 360° Hoops can be removed at the 6 o'clock position.

The Internal 360° Hoops are mounted in sleeves on the inside of the ductwork creating a closed circuit around the circumference. This ensures an aesthetically pleasing duct that is kept open if the airflow is turned off. The hoops are removable for easy laundry.

Internal 360° Hoops are available in duct systems from $\varnothing 200$ mm [$\varnothing 8$ in] and up. The hoops come pre-installed from the factory on ducts up to $\varnothing 660$ mm [$\varnothing 26$ in]. For diameters above $\varnothing 660$ mm [$\varnothing 26$ in], the suspension fiberglass rods are added on site. Adding the hoops is an easy process, as they simply glide in place.
