PROCEDURE OF ASSESSMENT

Antibacterial finishes on Textile Materials: Assessment of was determined according to AATCC Test method 100-2012.

Used bacteria (cultures delivered from National institute of public health and Czech collection of

Microorganisms):

CNCTC 6120	Klebsiella pneumoniae
CCM 4516	Staphylococcus aureus

Conditions of assessment:

- mass of samples: (2,0±0,2) g

number of samples for each used germ: six treated samples (antibacterial), six untreated (reference)

- sterilization of test samples: autoclave (120 °C, 15 min)

neutralizing solution: tryptone dilution medium: tryptone

temperature in incubator: (37±2) °C

influence time: 24 h

Results:

Result is percent reduction of bacteria calculated by following formula:

R = (C-A)/C.100,

where

R ... % reduction

A ... arithmetic average of three numbers of bacteria recovered from the inoculated treated test specimen incubated over desired contact period (24 h)

C ... arithmetic average of three numbers of bacteria recovered from the inoculated untreated test specimen immediately after inoculation (0 h)
