## SUSPENSIONS

## Introduction to Type 06 HE

Double Suspended Fixed H-Rail
For Harsh Environments

- Perfect for harsh environments
- Stable installation

Animation

- Great for larger diameters

Example of duct system configuration

## H-RAIL for Type 06 HE

While assembling the suspension system, the hot-dip galvanized (HDG) M8 threaded rods ensure strong, fast and practical installation. The HDG threaded rods come in $2 \mathrm{~m}\left(6^{\prime} 5^{\prime \prime} \mathrm{ft}\right)$ length. If the drop between ceiling and H -rail is longer than $2 \mathrm{~m}\left(6^{\prime} 5^{\prime \prime} \mathrm{ft}\right.$ ), it can be easily extended by joining two HDG threaded rods together by a HDG coupling nut. The HDG M8 rod is connected to H-rail using a HDG bolt, which can easily slide over the H-rail and be fastened at required position using HDG nut and washer. The suspension rails are extended by joining two H-rails together by a HDG connector with set screws. The duct will have sliders or a bulb edge to slide into the H-rail at the appropriate locations for both single and double H -rail configurations. The H -rails are bent to the exact angle that is needed to suit the elbows in your FabricAir duct system.
